EDUCATION

B.Sc. in Computer Science, Minor in Data Science

Sep. 2020 - May 2025

University of British Columbia (GPA: 3.7/4.0)

Vancouver, BC

- Dev in UBC Robotics and Data Science clubs. Selected for Google's invite-only Software Product Sprint.

WORK EXPERIENCE

Software Developer

Jun. 2025 – Present

IT Consulting Firm (Air Canada)

Toronto, ON

- Launched and scaled AWS-based mobile services with React.js and Node.js for 100K+ Air Canada passengers.
- Reduced API latency using Lambda and DynamoDB, cutting times from 50ms → 500μs for 50K+ events/day.
- Developed an AI virtual assistant on AWS Connect using Claude LLM and SQS with 90% intent accuracy.
- Eliminated 100+ manual QA hours/month across 20+ services by automating defect remediation for DynamoDB records with Node.js and SQL pipelines.
- Migrated 10+ services from Serverless Framework to AWS CDK, reducing deployment time by 40% and standardizing Infrastructure-as-Code (IaC) practices.
- Collaborated with DevOps to build CI/CD pipelines via GitHub Actions, CloudFormation, and IAM roles.

Full-Stack Developer

Sep. 2022 – Sep. 2023

Royal Bank of Canada

Toronto, ON

- Designed APIs and microservices in Java (Spring Boot) and Kafka across 5+ apps used by 10K+ internal users.
- Built a Spring Boot tool to automate environment config, cutting setup time from 2+ days → < 1hr for 200+ devs.
- Shipped a monitoring dashboard for 50 services to detect early anomalies and reduce incident resolution time.
- Strengthened security and compliance and cut manual errors by migrating 20+ services to HashiCorp Vault.
- Led migration of 10 microservices across OpenShift and Cloud Foundry, with zero customer impact.

PROJECTS

MoodMatch AI | React Native, MongoDB, Node.js, Python, scikit-learn

Jul. 2025 – Nov. 2025

- Created a music recommender app curating 500+ songs across 10+ moods via ML-based content filtering.
- Improved recommendation accuracy by 18% by fine-tuning models using Scikit-Learn and cosine similarity.
- Implemented JWT authentication and REST APIs for secure playlist management and user personalization.

ClusterVAN | Python, pandas, Scikit-Learn, Groq LLM, Plotly

Jan. 2025 – May 2025

- Built an AI-powered business recommender platform analyzing 300K+ records with unsupervised learning.
- Fine-tuned Groq LLM prompts for 25+ Vancouver neighborhoods, improving recommendation clarity.
- Delivered interactive Plotly dashboard for 150 users, enabling data-driven market analysis across 20+ clusters.

TL;DReviews | React.js, Node.js, Lambda, SageMaker, RDS, S3, Docker

Jan. 2025 – May 2025

- Set up an AWS pipeline analyzing 6,000+ reviews using the PEGASUS summarization model on SageMaker.
- Designed secure, compliant architecture using Macie, IAM, VPC, and KMS as per CISA/NIST standards.
- Automated CI/CD via GitHub Actions and Docker, halving deployment time and boosting release stability.

SKILLS

- **Languages:** Java, Python, JavaScript/TypeScript, Go, HTML/CSS
- **Frameworks/Libraries:** Spring Boot, React.js, React Native, Node.js, Express.js, D3.js, pandas, sklearn, JUnit
- **Tools/Technologies:** Apache Kafka, Git, Docker, AWS Services, OpenShift, Cloud Foundry
- **Databases:** MySQL, MongoDB, RDS
